Response to Arguments

1. Applicant's arguments with respect to claims 1-6,9-12 have been considered but are moot in view of the new ground(s) of rejection.

DETAILED ACTION

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6,9-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Chien (5,871,271).
4. Chien discloses a protective shell defining an inside surface and an outside surface and outer shell in communication with the outside surface and protective shell a plurality of lamps adapted to emit through the outer shell, a power supply in electrical communication with the plurality of lamps to provide power to the plurality of lamps and a motion detecting switch (41) in communication with the lamps such that upon movement of the motion detecting switch electrical power is supplied to at least one lamp of the plurality of lamps for a predetermined period of time (abstract, figs 1-3,8,9, col. 7 liens 23-26);

- A flasher module which receives power from said power supply and selectively provides power to individual lamps of said plurality of lamps, said flasher module having a plurality of programs for flashing said plurality of lamps, wherein said

predetermined period of time is the length of time of a particular program (col. 7 lines 28-43);

- Said power supply comprises a battery.
- Each lamp of said plurality of lamps is a light emitting diode.
- A first program of said plurality of programs turns on all of the lamps of said plurality of lamps for said predetermined period of time. (Col. 7 lines 23-43);
- Said predetermined period of a time is a first predetermined period of time and a second program of said plurality of programs flashes individual lamps of said plurality of lamps in a random manner for a second predetermined period of time.
- Each of the plurality of lamps are beneath an outside surface of the protective shell;
- The outer shell is provided with a plurality of translucent windows through which the lamps emit light;
- The translucent windows comprise protrusions;
- The protrusions are elliptical having a longitudinal axis aligned with a front to back axis of the protective shell.

Allowable Subject Matter

5. Claims 7 and 8 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter: The prior art cited does not teach the mechanism for closing the motion detecting switch as recited in the abovementioned claims.
